Finished placement of legs

4" high

What is a Modern Hairpin Leg?

Modern Hairpin Legs are metal replacement legs for furniture. Do you have a favorite dresser that could use a little TLC—or perhaps a great flea market furniture find that needs an update? Well, these whimsical legs offer a great design solution!

How do you use them?

1. Legs are designed to be placed at the bottom of a piece of furniture, one per corner. They can be placed parallel to the sides **(A)** or diagonally **(B)**. They require a flat piece of solid wood at the base on which to attach the legs. Examine the base of the piece of furniture, adding a piece of wood to reinforce the corners if needed. All screws must go into wood.

2. **Attaching the Legs:** Turn piece of furniture bottom side up. Position flat top edge of leg against corner of wood as desired. If positioning diagonally, place a mark 2-1/2" from each corner; align corners of base to these marks. Mark screw hole positions. Drill a hole at each position. Use a screwdriver to attach screws.
